

The interior of the Evolution™ Series 8" Poke-Thru Device.

## Evolution Series –The most innovative poke-thru devices in the market

Designed for retrofit and new construction, Evolution Series 8" Poke-Thru devices provide convenient access to power, communications, and A/V services recessed below floor level - providing maximum device protection. With five gangs of capacity that allow you to configure services for the needs of your space, services can be placed in any location within the unit.

The low-profile durable metal covers are available in six finishes, designed to match any space. The cover also features sliding doors that allow cables to neatly egress from the unit, protecting cables while reducing tripping hazards.

Evolution Series 8" Poke-Thru devices are the perfect fit for meeting and training rooms, classrooms, healthcare facilities or commercial buildings with open-space architecture.

## Features & Benefits

- **Recessed devices.** Five (5) compartments for power, communications, and/or A/V devices, all recessed 4" (102mm) below the floor level, providing maximum protection and device longevity.
- **Die-cast aluminum cover assemblies.** The Evolution Series poke-thru design includes all metal die-cast aluminum cover assemblies, available in powder coated finishes of black, gray, and bronze, as well as a brushed aluminum, satin brass plated and satin nickel plated finishes.
- **A/V compatible design.** The 8AT Series devices are designed to work with with Legrand's AVIP devices. Also compatible with most A/V manufacturers devices including their 1-gang, 2-gang, and 3-gang decorator style designs.
- **Flush tile version cover assemblies.** A flush style cover for tile applications allows the Evolution Series Poke-Thru Devices to be adjusted to the same level as the top surface of the floor covering. The tile cover is designed to be used in higher traffic applications, where a low profile is a must.
- **Auto-close egress doors.** Egress doors lock in position when slid open and automatically close around cables, reducing the egress opening to the smallest size possible.
- **Improved hinge design.** Provides greater durability while creating a more fluid, intuitive, opening and closing motion.
- **"Step-on-it" installation.** Quick and easy installation without the need for additional fasteners or a second installer.
- **Pre-pour sleeve.** Creates a removable cast-in-place core hole that allows the contractor to position poke-thru units before concrete is poured. Eliminates the cost and labor of coring the opening.
- **TopGuard™ Protection.** All Evolution Series Poke-Thru Devices, like every Wiremold Poke-Thru Device, meet and exceed UL scrub water exclusion requirements for tile, carpet, and wood covered floors.
- **Meets ADA Accessibility Guidelines.** Wide trim flange is designed to meet the ADA Accessibility Guidelines as it pertains to ADA Standard 4.5 which addresses changes in floor and ground surface levels. The poke-thru trim flanges are beveled so the slope is no greater than 1:2 ratio.
- **Suitable for use in air handling spaces.** In accordance with Sec 300-22(C) of the National Electrical Code.
- **UL Listed and UL Fire Classified to U.S. and Canadian safety standards.** UL Fire rated for up to 2-hour rated floors maintains the fire classification of the floor.
- **BAA compliant.** Durable finish SKUs are available in BAA compliant versions when needed. See product notes on how to order BAA compliant products.

### Cabling Specifications

#### Copper Cross Section:

The copper cross-sectional area determines the amount of wire fill capacity in a poke-thru device. Unlike other wire and cable management systems that utilize wire fill capacity, a poke-thru device is UL tested under fire conditions to determine the maximum amount of copper conductors that will pass through a poke-thru device, while maintaining the fire-rating of the floor assembly. All Legrand Poke-Thru Devices are UL Classified to U.S. and Canadian safety standards.

#### 8AT COPPER CROSS-SECTION

|                      | OUTER CHANNELS                       | CENTER CHANNEL                         |
|----------------------|--------------------------------------|----------------------------------------|
| Max Copper X-Section | 0.0154 sq. in. (9.9mm <sup>2</sup> ) | 0.0775 sq. in. (16.60mm <sup>2</sup> ) |
| Max # Conductors     | (3) 12 AWG                           | (24) 14 AWG                            |

**NOTE:** When using conductor sizes other than listed above, the aggregate cross-sectional area of the copper conductors shall not exceed the cross-sectional area listed.

| Copper Cross-Sectional Area of Commonly Used Conductors |                 |                         |
|---------------------------------------------------------|-----------------|-------------------------|
| Size                                                    | Solid           |                         |
| #24                                                     | 0.00032 sq. in. | (.206mm <sup>2</sup> )  |
| #23                                                     | 0.00040 sq. in. | (.258mm <sup>2</sup> )  |
| #22                                                     | 0.00050 sq. in. | (.322mm <sup>2</sup> )  |
| #14                                                     | 0.00323 sq. in. | (2.083mm <sup>2</sup> ) |
| #12                                                     | 0.00512 sq. in. | (3.303mm <sup>2</sup> ) |
| #10                                                     | 0.00815 sq. in. | (5.258mm <sup>2</sup> ) |
| # 8                                                     | 0.01296 sq. in. | (8.361mm <sup>2</sup> ) |

**NOTE:** Use above values for solid or stranded conductors.

### Flooring Specifications

#### 8AT CORE HOLE SIZES

| FLOOR TYPE                            | CORE SIZE (Min.) | CORE SIZE (Max.) |
|---------------------------------------|------------------|------------------|
| Covered Floors (Carpet, Tile or Wood) | 8" (203mm)       | 8 1/8" (206mm)   |
| Bare Concrete or Terrazzo             | 8" (203mm)       | 8 1/8" (206mm)   |

**CAUTION:** These devices are suitable for 1-, 1 1/2-, and 2-hour rated floor assemblies as described in the UL Fire Resistance directory for each service.

These devices meet all UL scrub water requirements, but are not suitable for wet or damp locations, or other areas subject to saturation with water or other liquids, such as commercial kitchens.

**Floor Coverings:** The poke-thru device is fire rated for concrete floor coverings. For floor coverings greater than 1" (25mm), consult factory.

**UL Certification:** To view the UL certification, please visit [www.UL.com/Database](http://www.UL.com/Database). Enter "Wiremold" as the company name and "CEYY" as the UL Category Code.

Poke-thru devices and abandonment fittings are for use with 1-, 1 1/2-, or 2-hour rated unprotected reinforced concrete floor and 1-, 1 1/2- or 2-hour rated floors employing unprotected steel floor units and concrete topping (D900-Series Designs), or concrete floors with suspended ceilings. (Fire resistive designs with suspended ceilings should have provisions for accessibility in the ceiling area below the poke-thru fittings.)

The assembled Poke-Thru stem and service fitting or the abandonment fittings will not reduce the ratings of the floor assembly when the thickness and type of concrete (required for the specific rating) are within the specified limits and the fittings are installed as specified:

- Spacing** – Minimum of 2' (610mm) OC and not more than one unit per 65 square feet (6 square meters) of floor area in each span.
- Concrete** – Minimum thickness of structural concrete topping of 2 1/4" (57mm) over metal deck or a minimum 3" thick reinforced concrete slab. Unit weight of concrete to be 110 to 155 pcf.
- Installation** – Mounted in a 8" (203mm) diameter core drilled hole in concrete per installation instructions accompanying the fittings or abandonment fittings. For use with power circuits, data and/or telephone cables as tabulated below.

**NOTE:** The material that is used in Wiremold® poke-thru devices is not listed under the directory for Fire Stopping Material because the poke-thru device is UL Classified as "Outlet Boxes and Fittings Classified For Fire Resistance (CEYY)". The pass/fail criteria comes from UL263. The pass criteria is that the poke-thru unit cannot exceed 325° F. above ambient before the concrete slab (or deck) reaches this same temperature. Some poke-thru devices are tested for 2 hours while others are tested for 4 hours. The intumescent material has never been tested as a fire-stopping material as a stand-alone device. This material is designed to work as a unit with the entire poke-thru device.

**NOTE:** UL Fire Classified for up to 2-hour rated floors.

**NOTE:** Receptacles can be wired as a standard or isolated ground device.

**NOTE:** BAA versions contain non-Tamper Resistant receptacles

**CAUTION:** Receptacle supplied with this Poke-Thru is not suitable for direct field wiring. Contact manufacturer for replacement. Field modifications will void UL Listing and Classification. Replacement receptacle is limited to this manufacturers' Catalog No. 68REC

**NOTE:** For more information on Device Plates and Bottom Feed Plates and on the additional options available, see the Device Plates and Bottom Feed Plates sections found later in this document.

\* Tunneling extends from the 5BLH to 575CHA so that power cables from the 20A duplex receptacle mounted on the left side of the poke-thru device are run into the junction box attached to the 575CHA.

\*\* Includes junction box attached to the 3/4" trade size conduit.

**CAUTION:** Receptacle supplied with this Poke-Thru is not suitable for direct field wiring. Contact manufacturer for replacement. Field modifications will void UL Listing and Classification. Replacement receptacle is limited to this manufacturers' Catalog No. 68REC

**NOTE:** For more information on Device Plates and Bottom Feed Plates and on the additional options available, see the Device Plates and Bottom Feed Plates sections found later in this document.

\* Tunneling extends from the 5BLH to 575CHA so that power cables from the 20A duplex receptacle mounted on the left side of the poke-thru device are run into the junction box attached to the 575CHA.

\*\* Includes junction box attached to the 3/4" trade size conduit.

**CAUTION:** Receptacle supplied with this Poke-Thru is not suitable for direct field wiring. Contact manufacturer for replacement. Field modifications will void UL Listing and Classification. Replacement receptacle is limited to this manufacturers' Catalog No. 68REC

**NOTE:** For more information on Device Plates and Bottom Feed Plates and on the additional options available, see the Device Plates and Bottom Feed Plates sections found later in this document.

\* Tunneling extends from the 5BLH to 575CHA so that power cables from the 20A duplex receptacle mounted on the left side of the poke-thru device are run into the junction box attached to the 575CHA.

\*\* Includes junction box attached to the 3/4" trade size conduit.

\*\*\* Requires 8CT-CTR terrazzo ring to be installed first.

## Evolution Series 8" Poke-Thru Devices Ordering Information

The top view shows the layout of the 20A Receptacles, 1PTHA, 575CHA, and 5BLH components. The bottom view shows the internal wiring and components. The side view shows the flush style cover with a 3/16" (4.8mm) thickness and a 'No Bevel' requirement. Dimensions include a total width of 9 1/4" (241mm), a total height of 16 1/4" (412mm), and a recessed depth of 4" (102mm).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**CAUTION:** Receptacle supplied with this Poke-Thru is not suitable for direct field wiring. Contact manufacturer for replacement. Field modifications will void UL Listing and Classification. Replacement receptacle is limited to this manufacturers' Catalog No. 68REC

**NOTE:** For more information on Device Plates and Bottom Feed Plates and on the additional options available, see the Device Plates and Bottom Feed Plates sections found later in this document.

\* Tunneling extends from the 5BLH to 575CHA so that power cables from the 20A duplex receptacle mounted on the left side of the poke-thru device are run into the junction box attached to the 575CHA.

\*\* Includes junction box attached to the 3/4" trade size conduit.

\*\*\* Requires 8CT-CTR terrazzo ring to be installed first.
